ORGANIZATION AND AUTHORITY

Rogers County Oklahoma ARES Emergency Communications Plan

The Amateur Radio Emergency Service (ARES) is composed of FCC-licensed Amateur Radio operators who have voluntarily registered their capabilities and equipment for public service communications duty. ARES is a part of the field organization of the ARRL, the national association for amateur radio.

ARES ® and Amateur Radio Emergency Services ® are registered service marks of the American Radio Relay League, Incorporated and are used by permission.

Under Federal regulations, Amateur Radio public service communications are furnished without compensation of any kind. Part 97 of the FCC's Rules and Regulations states, as the first principal under "Basis and Purpose," the following:

"Recognition and enhancement of the value of the amateur service to the public as a voluntary non-commercial communications service, particularly with respect to providing emergency communications."

ARES in Rogers County functions under the ARES Oklahoma Emergency Plan. The activity is directed by the Emergency Coordinator who reports to the District, Zone, and Section Emergency Coordinator (ZEC, DEC, and SEC). Zones and Districts as well as the respective assignments are defined in the ARES Oklahoma Emergency Plan as found on the on line web site ARESOK.Org.

To enable the ARES organization to conduct financial business and function as a non-profit volunteer entity, ARES Section officials filed application as a non-profit corporation. Articles of Incorporation as "ARES Oklahoma, Inc." were filed with the Oklahoma Secretary of State in December 2002, and subsequently approved. On October 6, 2004, the Internal Revenue Service issued notice that ARES Oklahoma, Inc. had been declared exempt from Federal income tax under section 501 (c) (3) of the Internal Revenue Code, and that contributions to the entity were therefore tax deductible. Hence, ARES has the protections, authority, and flexibility to receive grants and conduct business in support of emergency communications activities throughout the State.

PURPOSE OF PLAN

The purpose of this plan is to provide written guidelines by which Rogers County, OK ARES are to operate, and to outline a strategy for recruitment, training, and deployment that will meet the needs of the agencies we serve.

The primary mission of Rogers County, OK ARES is to furnish communications in the event of a natural disaster or a manmade disaster, as requested and authorized by the served agencies. These agencies include but are not limited to the following, emergency management agencies, public safety departments, Homeland Security, public health agencies, and public service agencies such as the American Red Cross and the Salvation Army when regular communications fail or are inadequate. ARES operators use standard amateur radio equipment and frequencies, creating an optimum environment for interoperability and mutual aid throughout the state (and nation.)

EDITING AND COPYING THIS PLAN

Permission is hereby granted to reproduce this document in limited quantities for distribution to ARES members and officials and to agencies served by ARES. Changes to this document may be only done by the following procedures. As the need arises amendments will be added to this document after the Section Manager, Section Traffic Manager and the Section Emergency Coordinator have approved them. Once a year the SEC will update this document to incorporate the approved amendments. Appendix A is added for the amendments to be attached during the working year of this document. Appendix B is added to keep a revision history of this document. Each year when this document is updated, the revision history will list the amendment numbers, section number, and date of the amendment was added.

ARES LEADERSHIP

ARES Leadership above the Emergency Coordinator is defined in the ARES Oklahoma Emergency Plan.

Emergency Coordinator (EC)

The EC is the chief ARES official in Rogers County, and is directly responsible to the DEC. The duties of Emergency Coordinator require a serious commitment of time and effort by the volunteer who accepts it. The EC serves at the pleasure of the SEC or SM, but works closely with the DEC (or ZEC if no DEC is appointed) day to day.

The EC's duties are many and complex. No EC can do everything himself/herself. To be effective, he can delegate duties to Assistant EC's (AEC's). He/she may appoint as many AEC's as needed. AEC appointments do not need approval by any other ARES official. AEC's need not be ARRL members, but should be encouraged to join. They serve at the pleasure of the EC and their appointments lapse when the EC resigns or is replaced, though any or all of the same individuals may be re-appointed by the new EC at his/her discretion. Key areas that AEC's may assist in are: administration, logistics, operations and technical. AEC's many have different functions in day-to-day planning than in an emergency. The EC and AEC's together form the ARES Planning Committee for the area that they serve.

The EC organizes and coordinates Amateur Radio communications in the County to accommodate the needs of agencies served.

The Rogers County ARES EC Is Ken Johnson, KB0ZTX, Ph 901-240-3051, kb0ztx@gmail.com

The Rogers County ARES AEC is Jeff Smith, WX5WDG, Ph 918-808-4683, stormrider1970@gmail.com

AEC duties will be added to this document if additional AECs are appointed.

TRAINING STANDARDS AND REQUIREMENTS

In order to build the value proposition of ARES among key government and public service officials in Oklahoma, training must equip ARES volunteers with a foundation of skills and background knowledge. Training provided by - or advocated by – the public safety and public service agencies we serve will yield volunteers who enjoy a higher level of trust and perceived value among those officials. Drills and exercises should be carried out from time to time to practice learned skills, and to insure readiness to respond quickly in providing effective emergency communications whenever an incident may occur. Drills and exercises conducted in conjunction with those of served agencies are strongly recommended.

The following is a minimum outline of training for Rogers County, OK ARES participation

EC – EMC COMM Level 1, ICS 100 & 200, NIMS 700 & 800

AECs are also encouraged to complete the training as required by the EC.

Every Rogers County, OK ARES volunteer is encouraged to at least complete EMC COMM Level 1, and

complete a CPR & Basic First Aid Class. Skywarn Training is also highly recommended for all volunteers.

ARES Members are also encouraged to seek additional training in order to provide a larger pool of more qualified participants for more complex events and higher levels of served agency support. These qualifications are defined in Appendix C.

Simulated Emergency Tests

Simulated Emergency Tests (SET) provide an opportunity to determine a state of readiness for the ARES organization as well as to provide training directed toward a specific scenario and incident. In addition a SET provides an opportunity to activate local emergency plans in conjunction with served agencies and local government entities. This SET dimension helps ensure that the served agencies and local government entities develop a sense of trust and relationship with the ARES organization.

SETs should be conducted in accordance with the annual event as scheduled by the ARRL if possible.

SETs should be conducted on an annual basis at a time that is tailored to local conditions if the ARRL annual schedule is not practical for the local situation.

SETs can be as involved or as simple as the local conditions warrant. The objective is to increase preparedness and the level of SET complexity should be tailored to what is practical.

For any drill or actual emergency a debrief is to be completed in writing by the EC and shared with all officers of ARES Oklahoma. This will help ensure better training across the Section. This report can be sent to DEC's, ZEC's, and the SEC who will help get the report to all.

ALERTING AND NOTIFICATION

Levels of Alert

ALERT STATUS		County Alert	County Activated Alert	District Activated Alert	Zone Activated Alert	Section Activated Alert
Condition Status	Standby	Condition 1	Condition 2	Condition 3	Condition 4	
County Alert	X					
County Activated Alert (District Standby)		X				
District Activated Alert (Zone Standby)		X	X			
Zone Activated Alert		X	X	X		
Section Standby				X		
Section Activated Alert	X	X	X	X	X	

fig 1-1

When a disaster strikes or threatens any Oklahoma community, there are five (5) conditions that may

arise.

Standby – The county has been placed on Alert

Condition 1 – The County has been placed on Activated Alert

Condition 2 – The District has been placed on Activated Alert

Condition 3 – The Zone has been placed on Activated Alert

Condition 4 – The Section has been placed on Activated Alert

Alert -- notifies ARES operators in a specified area (such as a County or District) or functional unit (such as a net) that their services may be needed on short notice in the next 24-48 hours. It is typically issued by the SEC or, occasionally by DEC, or EC. The alert may apply to the entire Section or to specific Districts or Counties. But omission of any area does not prohibit others from taking whatever precautionary steps may be appropriate. The SEC usually does not issue a follow-up order raising the alert level but leaves that step to the ECs or DECs in the affected areas. Each of the following County, District, Zone, & Section will use this alert mode if conditions exist.

This Alert declaration signals DEC's that they should alert EC's, "deployment team" coordinators, Net Managers, and other key emergency communications officials to prepare for short-notice calls. All radio operators in the alerted Districts or Counties should monitor designated net frequencies and keep closely in touch. Alerted Amateur Radio Emergency Communications operators should prepare to be en route to duty posts within two hours or less of being assigned. Preparations may include updating "ready-kits," arranging to take time off from work, fueling vehicles and power generators, charging batteries, obtaining stocks of expendable batteries and testing emergency-related portable equipment

Nets operating in Standby Mode customarily run in "free mode," i.e., they are not directed. Radio operators and officials should monitor the appropriate frequencies for information and for possible increases in or cancellation of the alert status.

Activated Alert -- is descriptive of operational status. It is usually issued by DECs or ECs and designates nets, and such, to perform specific tasks. The alert level becomes Activated in a County or District when specific duty posts are staffed and become operational. A net typically "goes Activated" when a net control operator opens the net. A DEC or EC may place any District or local net or other operating unit in his District on Activated Alert.

Standdown Alert -- authorizes DECs and ECs to begin the stand-down phase of the activation. Standdown is permissive only; it does not require that operations be shut down in the specified area. It simply advises the alerted DECs and/or ECs that no apparent reasons exists for continuing operation unless they have local requirements. The DEC and EC then may reduce operating hours, restrict operations or close down designated nets as the emergency passes and traffic loads subside. Only the SEC (or SM) may invoke a Stand down Alert for a Section net, or if more than one District is involved in the emergency operation, because specific DECs or ECs may not be aware of conditions elsewhere that might require their support. A DEC can invoke a Stand down Alert in the District net if the emergency-operation involves only his/her own District and no Section net is in operation.

No Alert is the normal situation for Amateur communication. No state of alert or emergency exists.

The EC, DEC, & ZEC will write up Notification procedures for each of their areas in their EMCOMM Plans.

When any ARES group is activated for service, the EC will notify the DEC, ZEC, and SEC as soon as possible, so that contingency plans may be prepared in the event additional resources are needed, and to insure that ARRL Section officials are prepared for inquiries from public safety agencies or the press.

The Rogers County, OK ARES EC currently notifies personnel of Standby Status via group e mail distribution and Alert Status notifications via a text contact list maintained by the EC/ AEC.

POLICIES

1. Certain policies prevail when ARES Oklahoma groups conduct emergency operations. When these policies differ from ARRL policy, the ARES Oklahoma procedures take precedence.
2. The SEC, ASEC, DECs and ECs do not assume specific operating duties when their organizations are on Condition 2 or above. They must remain free to cope with their official duties. When a ARES District is not activated, however, this restriction does not apply.
3. ARES members on duty are directed only by ARES officials. Served-agency officials may not change the ARES volunteer's instructions.
4. Amateurs who hold professional emergency-response obligations (e.g. police officer or County emergency management) will not be appointed EC or DEC. These positions may be temporarily filled by professional personal, to give coverage to an area, and until someone else is found to fill the position.
5. ARES operators, while on duty, perform only their assigned ARES duties. If the operator wants to assume other duties he must ask the EC to be relieved from ARES duties.
6. Complete service information will be written on the message form.
7. Written messages in ARRL format are used whenever third parties are involved.
8. A reply takes the same precedence as the original; a Priority message gets a Priority reply.
9. In-coming Welfare inquiry traffic will not be handled on any ARES Emergency Net operating in condition 1 or above.
10. Out-going Welfare "assurance" messages get a W (Welfare) precedence and will not be handled on any net operating on Condition 1 unless approved by the Net Manager. They will not be handled at all during Condition 2 or above Alert.
11. At their option, ARES officials may use the Emergency Net frequency for consultation and coordination.
12. Except for MAYDAY situations, business on the Emergency Net frequency must not be allowed to cause delays in listing emergency-related traffic or listening for weak stations.
13. Formal Numbered traffic is not be transmitted on a tactical net, but actually transmitted on side frequencies. However, during long periods of inactivity traffic may be handled on the net frequency at the discretion of the Net Manager or Net Control.
14. Situation permitting, emergency communications use VHF or UHF nets in preference to HF. HF nets should be reserved for communications into and out of the effected area.
15. When any operation taxes local ARES resources, the EC asks the DEC for support. The DEC may assign ARES units from other counties within the District and/or request additional help through the ZEC or SEC. The SEC may recruit additional personnel from any available source.
16. ARES officials may do whatever is legal and reasonably necessary for the orderly conduct of the operation.
17. Time format is to match that being used by the served agencies ARES Oklahoma is working with. Any message going out of the Section will use UTC in 24-hour format. Dates must agree with the time system being used.
18. Any release of information to the Media should only occur by the PIO. This means if we are working with a served agency then all media request for information will be referred to that served agencies PIO. No release of information by an ARES PIO shall occur until approved by the ARES official in charge. We shall also use ARRL appointed PIO personnel when ever possible.

CONCEPT OF OPERATIONS

The purpose of this section is to establish guidelines for how the Rogers County, OK ARES organization is to operate. This document does not presume to establish a Concept of Operations for all possible situations, circumstances, agency relationships, county/municipality structures or different types of hazards, either man made or natural. Examples of known hazards within Rogers County are detailed in Appendix G.

- a) In all cases, requests for ARES assistance should be directed first to the county EC or in their absence the AEC. When any ARES member becomes aware of an actual or potential need for ARES activation, all effort should be made to contact the responsible EC or AEC. Only when an EC or AEC cannot be contacted in a reasonable time should the DEC or ZEC be contacted. Once the EC, DEC, or ZEC has been notified, ARES members should monitor their local resource repeater, or the ARES Oklahoma HF net, for more information and instructions.
- b) ARES members are not authorized to go to the site of any emergency incident unless authorized to do so by an EC, DEC, ZEC, SEC, or the resource net control. This to preserve the safety of the individual member as well as to ensure that resources are applied where and when needed.
- c) If any requested action involves unacceptable risk, the person should NOT take the action. Upon refusal, the person should notify the net control station that he/she will not be performing the requested action, along with a brief statement of their risk assessment. There is no job so important that it cannot be done safely. In complying with this guideline, not only is the safety of the individual preserved but in most cases the requested action will be better served if a person trained and equipped to perform that action is assigned.
- d) Staging and shift assignments will be established as needed to ensure that adequate staff is available for extended periods.
- e) Rogers County, OK ARES Nets are activated on air and may be in conjunction with Alert Status notification **via text notification**. The primary net frequencies are:
 - 1) 147.090+ Tone 88.5 VHF
 - 2) 147.090 Simplex Backup if repeater is down
 - 3) 146.700- Tone 100.0

Oklahoma State ARES HF net will be activated when conditions include multiple counties, the entire Section or where the ARES Oklahoma organization as an entity is provided mutual aid to other states. The primary ARES Oklahoma HF net frequencies are:

- i) 3900 KHz for evening and night operations on LSB
- ii) 7260 KHz for morning and day operations on LSB
- iii) 7290 KHz on LSB for Health and Welfare traffic (NCS may assign other frequencies or additional frequencies depending on volume and situation demands)
- f) The primary net operations may be augmented by other assigned nets operating on frequencies determined by the NCS for the ARES Oklahoma HF net after coordination with appropriate ARES officials which would include SM or SEC or their delegates.
- g) The Incident Command System (ICS) should be employed for all emergency response conditions especially when working with agencies such as local law enforcement and fire departments, state and federal agencies. Training for the ICS is encouraged for all ARES members. ICS Assignments when working with served agencies will follow those of the served agency guidelines.

h) *All formal messages must be written traffic in standard ARRL format when that traffic is being sent across districts, regions or out of state. The use of the standard ARRL format is encouraged at all levels.

However it is also recognized that at the county and city level, the local served agencies may already have a message format that is built into their SOP. In those instances it is the responsibility of the EC to establish an acceptable format that will allow efficient message handling and also be convertible to the ARRL message format for movement outside the county or city. ICS 213 would be one such format:

[https://training.fema.gov/emiweb/is/icsresource/assets/ics%20forms/ics%20form%2020213,%20general%20message%20\(v3\).pdf](https://training.fema.gov/emiweb/is/icsresource/assets/ics%20forms/ics%20form%2020213,%20general%20message%20(v3).pdf)

- i) All formal messages must be signed by the official who originates them and is taking responsibility for their content. Appropriate title must be included with the signature.
- j) Message procedures of EMERGENCY, Priority, Welfare and Routine as defined by ARRL form FSD-3 shall be used.
- k) All stations should keep a log of both formal and tactical messages. If local served agencies do not already have a station log then it is recommended that the ICS 309 be adapted to fit the needs of ARES Oklahoma.

AGENCY AND MUTUAL AID ASSISTANCE

Agencies asking ARES Oklahoma for communications assistance get the full benefit of the ARES infrastructure tailored to a level appropriate for the specific hazard. The organizational structure includes numerous nets, training programs and exercises that involve those agencies and cooperative planning with the agencies to learn their needs. It is highly desirable and strongly recommended that a Memorandum of Understanding (MOU) be put in place with each served agency as soon as possible. It is important that the MOU clearly state the expectations of the agency and the clear description of the services that the ARES organization can and cannot provide.

Mutual Aid Within and Between Districts and Sections are managed by the corresponding DECs, SECs, and ECs and the roles are defined in more detail in the Oklahoma ARES Emergency Communications Plan.

General Policy Regarding Mutual Aid

Providing Mutual Aid regardless upholds the highest standard of amateur service in that we are to always provide aid to our brother and sister amateurs in support of their emergency incident activities. In providing that mutual aid there will be times when conditions in the local area demand resources at the same time as the demand for mutual aid is being made. In such instances and under the assumption that the demand for resources exceeds the local capability, the following will apply:

- a) The local EC or DEC will give first priority to the area/district to which they have responsibility
- b) The EC should immediately report the need for support to respond to the mutual aid request to the DEC. The DEC is responsible for providing such support if possible. If it is not possible then the DEC should report the request to the ZEC for help from a neighboring district.

REPORTING

Regular reports concerning operations, state of preparedness, achievements and any special issues

related to ARES operations in a district or local area are important. These reports are completed by the Rogers County, OK ARES EC through the ARESOK.org website at the beginning of each month.

NET OPERATIONS

Duties of Net Managers during emergency Operation and state wide net operations are defined in the ARES OK Emergency Plan.

ARES EC and AEC should consider staffing needs for nets including qualifications, experience, duration/ turnover, and contingencies for changing conditions.

Consider the following:

- 1) Once the operation is under way, it may be brief, or it could last for days. Relief operators must usually be recruited for ARES operations that last more than a few hours. Keeping each active operating position filled during a long operation is a necessary but time-consuming task that should not be allowed to interfere with the EC other duties. Such recruiting is best conducted by the AEC.
- 2) Net control should not be located in a disaster area, where it could suffer adverse factors. Rather, NCS should be located so as to hear stations in the impacted area as well as possible.
- 3) The EC and AEC should select net control operators on the basis of signal quality and strength and operating skills, and should take propagation into account. NCS will appoint relay stations as necessary.
- 4) A two-hour emergency-net control shift is the norm, but can be adjusted as convenience and necessity require.
- 5) If destructive QRM occurs on an emergency net frequency, the SEC should be notified promptly by telephone or radio (but not on the net frequency). If the NCS is unable to move the troublesome station by polite request, the SM may ask the FCC to intervene.

Frequencies

Rogers County, OK ARES Nets are activated on air and may be in conjunction with Alert Status notification via text notification. The primary net frequencies are:

- 1) 147.090+ Tone 88.5 VHF
- 2) 147.090 Simplex Backup if repeater is down
- 3) 146.700- Tone 100.0

When communication is needed via amateur radio to the regional level outside of the county, the nets described in Concept of Operations will be used, including the passing of traffic utilizing the NTS. The 7.290 Traffic Net is also utilized as a resource for access to and passing of NTS messages,

MEMBERSHIP

Membership in the ARES Oklahoma organization is to be open to all licensed amateur radio operators who have an interest and a desire to provide communications that aid the operations of the served agencies and which provide support to the general welfare of the public. The EC's and DEC's are given the latitude to address acceptance or non acceptance of amateurs seeking ARES membership based on their judgment as to what is best for the total organization. Additional qualifications or requirements for membership beyond those identified by the ARRL that may be invoked however must never be arbitrary or capricious or which hinder the basic operation, purpose and availability to all amateurs of the ARES and membership in it.

LEADERSHIP APPOINTMENTS

Appointments to ARES Leadership positions (ZEC, DEC, EC, AEC and OES) require that a person be a current ARRL member in good standing. Appointment requests are forwarded to the SEC for consideration. The SEC upon reaching a decision to request that the appointment is made official will forward the application for Leadership Appointment to the SM. Appointments that are approved will be recorded in the ARRL Field Organization Data Base. A certificate attesting to the appointment will be generated and distributed to the appropriate next level of leadership for presentation. Those serving in ARES Oklahoma Leadership positions are to be guided by the ARRL published guidelines for each position. All ARRL ARES Leaders must establish good relations with all served agencies and should work to ensure that they represent the ARES organization in a manner such that the organization is held in high regard by such agencies and the general public. This relationship of trust is vital to the work of ARES Oklahoma and any barrier to that working relationship must be addressed.

DRESS CODE

ARES Oklahoma's dress code is being set based on Safety and the conditions that may exist within an Emergency Situation.

Required:

- 1) ARES appointed officers EC, AEC, DEC, ADEC, ZEC, ASEC, SEC will have and wear an ARRL name badge with rank tag during activation.
- 2) Full covered shoes – This means if there is a medical condition that you can not wear boots then, a shoe that is all leather, with no nylon netting or any other composition on it. If you have a condition you need to let the EC, DEC know so you can be worked in to a position that will not require you to be out on the scene at any time.
- 3) Boots – Are required to be worn by ARES Oklahoma personnel that are located out in the field around where there are potential hazards.
- 4) Long Pants – Shorts are not allowed
- 5) Shirt – Cut off shirts or shirts with the sleeves cut off are not allowed

May be required based on the situation:

- 1) Hard Hats
- 2) Eye Protection

Appendix D

ARES Threat Advisory Levels and ARES Response Guidelines

Warning Code Level Change: The Federal Department of Homeland Security has created a warning system that represents increasing terrorism threat levels by a Green, Blue, Yellow, Orange and Red color code progression. Since this was first implemented the warning code level has been changed several times from Yellow to Orange and back again. These colors correspond to Moderate and High Levels respectively. ARES members should adopt emergency readiness procedures that correspond to these levels. Below each level definition a few steps have been added to indicate suggested corresponding ARES actions. These are provided as guidelines with the intent of creating discussion within each district on what the ARES response should be in that location.

- 1) **Low Condition (Green):** This condition is declared when there is a low risk of terrorist attacks. Federal departments and agencies should consider the following general measures in addition to the agency specific Protective Measures they develop and implement:
 - a) Refining and exercising as appropriate preplanned Protective Measures
 - b) Ensuring personnel receive proper training on the Homeland Security Advisory System and specific preplanned department or agency Protective Measures
 - c) Institutionalizing a process to assure that all facilities and regulated sectors are regularly assessed for vulnerabilities to terrorist attacks and all reasonable measures are taken to mitigate these vulnerabilities
- 2) **Recommended ARES Response (Increase General Preparedness):**
 - a) Members should use this time to improve their operating skills and ARECC certification level
 - b) Participation in public service events, meetings and weekly nets
- 3) **Guarded Condition (Blue):** This condition is declared when there is a general risk of terrorist attacks. In addition to the Protective Measures taken in the previous Threat Condition, Federal departments and agencies should consider the following general measures in addition to the agency-specific Protective Measures that they will develop and implement:
 - a) Checking communications with designated emergency response or command locations
 - b) Reviewing and updating emergency response procedures
 - c) Providing the public with any information that would strengthen the ability to act
- 4) **Recommended ARES Response (Verify Readiness)**
 - a) Participation in public service events, ARES meetings and weekly nets to maintain and improve operating skills
 - b) Members should continue to improve their operating skills and ARECC certification level
 - c) Emergency Plans should be reviewed and contributions or corrections should be submitted
 - d) General readiness of equipment should be verified monthly
 - e) ECs should regularly coordinate with public safety, emergency management and non-government disaster relief organizations
- 5) **Elevated Condition (Yellow):** An Elevated Condition is declared when there is a significant risk of terrorist attacks. In addition to the Protective Measures taken in previous Threat Conditions, Federal departments and agencies should consider the following general measures in addition to the agency specific Protective Measures that they will develop and implement:
 - a) Increasing surveillance of critical locations
 - b) Coordinating emergency plans as appropriate with nearby jurisdictions
 - c) Assessing whether the precise characteristics of the threat require the further refinement of preplanned Protective Measures
 - d) Implementing contingency and emergency response plans as needed

- 6) Recommended ARES Response (Make Ready)
 - a) Prepare home food, water and medical supplies. Review family emergency plan
 - b) Review and revise as needed the ARES Emergency Plan, County maps and HAZMAT books to ensure that they are up to date and available
 - c) Practice formal traffic handling monthly on traffic nets
 - d) Log into weekly nets
 - e) Check/change HT batteries weekly
 - f) EC should make weekly contact with emergency management and report status on nets
 - g) EC should put ARES on "Ready" status, indicating that activation is possible but is not expected
 - h) Formally invite served organizations to participate in ARES meetings and training exercises
- 7) High Condition (Orange): A High Condition is declared when there is a high risk of terrorist attacks. In addition to the Protective Measures taken in previous Threat Conditions, Federal departments and agencies should consider the following general measures in addition to agency specific Protective Measures that they will develop and implement:
 - a) Coordinating necessary security efforts with Federal, State and local law enforcement agencies or any National Guard or other appropriate armed forces organizations
 - b) Taking additional precautions at public events and possibly considering alternative venues or even cancellation
 - c) Preparing to execute contingency procedures such as moving to an alternate site or dispersing their workforce
 - d) Restricting threatened facility access to essential personnel only
- 8) Recommended ARES Response (Alert/Standby)
 - a) Avoid public service events and large public gatherings
 - b) Maintain home food, water and medical supplies. Draw ready cash
 - c) Test home and mobile communications equipment weekly
 - d) Charge up HT and storage batteries weekly
 - e) Refresh food, water and clothes in go-kits
 - f) Check car and keep gas tank nearly full
 - g) Refresh gas for emergency generators and test generator performance
 - h) Pack go-kits and emergency batteries in car
 - i) Program HT, home and mobile equipment to ARES frequencies
 - j) Carry HT at all times
 - k) Log into ARES nets indicating state of readiness and availability
 - l) Practice formal traffic handling monthly on traffic net
 - m) EC should put ARES on notice: "Alert" indicating that activation is possible or on "Standby" indicating that activation is probable.
 - n) EC should prepare a detailed Readiness Assessment for emergency management
 - o) ARES leadership should request and hold planning meetings with emergency management, public safety and non-government disaster relief organizations
 - p) Alternate sites for "Red" alert meetings should be planned and agreed upon with participating organizations
 - q) Formally request emergency management to brief membership at ARES meetings
 - r) EC should be in contact with emergency management and receive status briefing weekly
 - s) Review status of security badges with issuing organizations and update if needed
- 9) Severe Condition (Red): A Severe Condition reflects a severe risk of terrorist attacks. Under most circumstances the Protective Measures for a Severe Condition are not intended to be sustained for substantial periods of time. In addition to the Protective Measures in previous threat conditions, Federal departments and agencies also should consider the following general measures in addition to the agency specific Protective Measures that they will develop and implement:
 - a) Increasing or redirecting personnel to address critical emergency needs
 - b) Assigning emergency response personnel and pre-positioning and mobilizing specially trained teams or resources
 - c) Monitoring, redirecting or constraining transportation systems

- d) Closing public and government facilities

10) Recommended ARES Response (“Standby” or “Hot Standby” status):

- a) Do NOT participate in public service events or attend large public gatherings
- b) Secure home, emergency supplies and family members
- c) Carry HT at all times monitoring ARES nets
- d) Update security badge complement (color coded button, bracelet, etc) and procedures for hospital access
- e) If activated, work up duty roster and staff ARES locations on a 24/7 basis with two or more operators; otherwise hold daily roll call nets to record status and availability of members to support operations

Appendix E

DEFINITIONS

"AEC" – Assistant Emergency Coordinator

"APRS" – Automatic Packet Reporting System – A digital system that transmits and displays data on maps on computer screens. Highly effective as a parallel to voice circuits.

"ARES" – Amateur Radio Emergency Service headed by the Section Emergency Coordinator (SEC); is part of the ARRL field organization. More information can be found at: <http://www.arrl.org/FandES/field/psec/sec1-ch1.html>

"ARRL" – American Radio Relay League – National Amateur Radio organization dedicated to implementing Part 97 of the FCC regulations.

"Communications emergency" – (as defined by the FCC) occurs when normal communications systems are disrupted in a specified area.

"County" - Any geographical jurisdiction assigned to an EC.

Appendix F Rogers County Hazard Planning

Members of the Rogers County ARES team should be aware of and prepared to potentially respond to a number of hazards. Severe weather and wildfires are some of the most common of these hazards that affect life and property. The following lists known hazards that require readiness to respond. This list is not necessarily all inclusive of course.

- 1) Severe storms (Lightning, Flooding, Winds, Hail, Tornados)
- 2) Wildfires
- 3) Transportation incidents (Rail, Highway, River, Air)
- 4) Hazmat including that associated with transportation incidents
- 5) Power outages
- 6) Terrorism
- 7) Pandemics
- 8) Civil unrest

Future updates to this appendix will be made in alignment with published county hazard mitigation plans.
